Appl. No. 09/845,618

Amendment dated May 21, 2004

Reply to Office action of November 21, 2003

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended) A method for automatically constructing a customized associate web site, comprising:

receiving <u>a selection of a set of</u> presentation preferences, the set of presentation <u>preferences being selected from a plurality of predefined sets of presentation preferences</u>;

receiving via an intuitive <u>a</u> graphical user interface associate data uniquely describing the associate;

assembling the presentation preferences and associate data, thereby creating a customized web site;

presenting a preview of the customized web site; and publishing the customized web site.

Claim 2. (currently amended) A method according to claim 1 wherein the step of receiving <u>a set</u> of presentation preferences includes <u>displaying a plurality of previews</u>, each preview associated with one of the plurality of predefined sets of presentation preferences, and receiving a selection of one of the displayed previews representing from among a set of presentation preferences predefined by a firm affiliated with the associate.

Claim 3. (currently amended) A method according to claim 1 wherein the step of receiving associate data includes receiving a selection of pages the associate elects to include in the web site.

Claim 4. (currently amended) A method according to claim 1 wherein the step of receiving associate data includes identifying pages which a firm affiliated with the associate requires to must-be included in the web site.

2

Claim 5. (currently amended) A method according to claim 1 wherein the step of receiving

associate data includes identifying the an order of pages to display.

Claim 6. (original) A method according to claim 1 wherein the step of receiving associate data

includes identifying information blocks to display on a page of the web site.

Claim 7. (original) A method according to claim 6 wherein the step of receiving associate data

further includes receiving foil ratting instructions regarding information blocks to display on a

page of the web site.

Claim 8. (original) A method according to claim 1 wherein the step of receiving associate data

includes identifying the order of information blocks to display on a page of the web site.

Claim 9 (currently amended) An apparatus for automatically constructing a customized

associate web site, comprising:

means for receiving a selection of a set of presentation preferences, the set of presentation

preferences being selected from a plurality of predefined sets of presentation preferences;

means for receiving via an intuitive a graphical user interface associate data uniquely

describing the associate;

means for assembling the presentation preferences and associate data, thereby creating a

customized web site;

means for presenting a preview of the customized web site; and

means for publishing the customized web site.

Claim 10 (currently amended) An apparatus according to claim 9 wherein the means for

receiving presentation a set of preferences includes means for displaying a plurality of previews,

each preview associated with one of the plurality of predefined sets of presentation preferences,

and means for receiving a selection of one of the displayed previews representing from among a

3

set of presentation preferences predefined by a firm affiliated with the associate.

{RRL0552.DOC;1}

Claim 11 (currently amended) An apparatus according to claim 9 wherein the means for

receiving associate data includes means for receiving a selection of pages the associate elects to

include in the web site.

Claim 12 (currently amended) An apparatus according to claim 9 wherein the means for

receiving associate data includes means for identifying pages which a firm affiliated with the

associate requires to must be included in the web site.

Claim 13 (currently amended) An apparatus according to claim 9 wherein the means for

receiving associate data includes means for identifying the an order of pages to display.

Claim 14. (original) An apparatus according to claim 9 wherein the means for receiving

associate data includes means for identifying information blocks to display on a page of the web

site.

Claim 15. (original) An apparatus according to claim 14 wherein the means for receiving

associate data further includes means for receiving formatting instructions regarding information

blocks to display on a page of the web site.

Claim 16. (original) An apparatus according to claim 9 wherein the means for receiving

associate data includes means for identifying the order of information blocks to display on a page

of the web site.

Claim 17 (currently amended) An apparatus for automatically constructing a customized

associate web site, comprising:

a processor;

a memory connected to said processor storing a program to control the operation of said

processor;

the processor operative with the program in the memory to:

receive a selection of a set of presentation preferences, the set of presentation

4

preferences being selected from a plurality of predefined sets of presentation preferences;

receive via an intuitive graphical user interface associate data uniquely describing

the associate;

assemble the presentation preferences and associate data, thereby creating a

customized web site;

present a preview of the customized web site; and

publish the customized web site.

Claim 18 (currently amended) An apparatus according to claim 17 wherein the processor is

further operative with the program in memory to display a plurality of previews, each preview

associated with one of the plurality of predefined sets of presentation preferences, and receive a

selection of one of the displayed previews representing from among a set of presentation

preferences predefined by a firm affiliated with the associate.

Claim 19 (currently amended) An apparatus according to claim 17 wherein the processor is

further operative with the program in the memory to receive a selection of pages the associate

elects to include in the web site.

Claim 20 (currently amended) An apparatus according to claim 17 wherein the processor is

further operative with the program in the memory to identify pages which a firm affiliated with

the associate requires to must be included in the web site.

Claim 21 (currently amended) An apparatus according to claim 17 wherein the processor is

further operative with the program in the memory to identify the an order of pages to display.

Claim 22 (original) An apparatus according to claim 17 wherein the processor is further

operative with the program in the memory to identify information blocks to display on a page of

the web site.

Claim 23 (original) An apparatus according to claim 22 wherein the processor is further

operative with the program in the memory to receive formatting instructions regarding

information blocks to display on a page of the web site.
